

Research, Measurement, and Evaluation in Corporate Communications: Alternatives to ROI

David Geddes, Ph.D.
Managing Director
Geddes Analytics LLC
Past Chair, Institute for PR
Measurement Commission

Athens

16 October 2014

Presentation objectives

1. For public relations practitioners
2. Better public relations through research and measurement
3. New and traditional
4. No mechanics
5. Alignment
6. Role in building organizational value

1 What exactly is ROI?

Why ROI?

- Fundamental to decision-making
- Common language
- Communications/PR need for clearer metrics

What is ROI?

Return

$$\text{ROI} = \frac{(\text{Total € Earned} - \text{Total € Invested})}{(\text{Total € Invested})} \times 100\%$$

Investment

What is ROI?

- Results \neq ROI
- 576 news stories \neq ROI
- 57,423 unique visits \neq ROI
- 176,000 fans \neq ROI
- 12% increase in brand awareness \neq ROI

When to use ROI?

- **Only** when you can measure:
 - € invested
 - € earned, saved, or avoided

Total value of PR $>$ ROI

Total Value of PR $>$ ROI

Total Value of PR = Tangible + Intangible

Total Value of PR = Near-Term + Lasting

PR builds intangibles

- Public opinion
- Customer experience
- Brand equity
- Corporate reputation
- Customer loyalty
- Employee engagement
- Partner relationships
- License to operate / regulations

2 Begin with theory

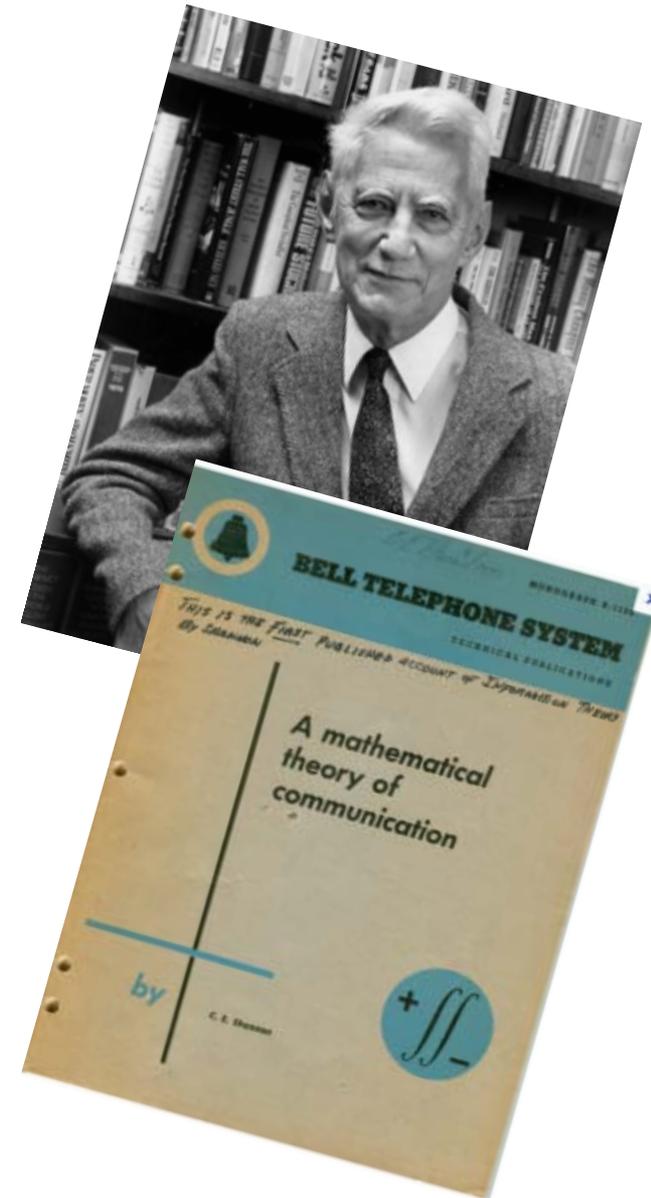

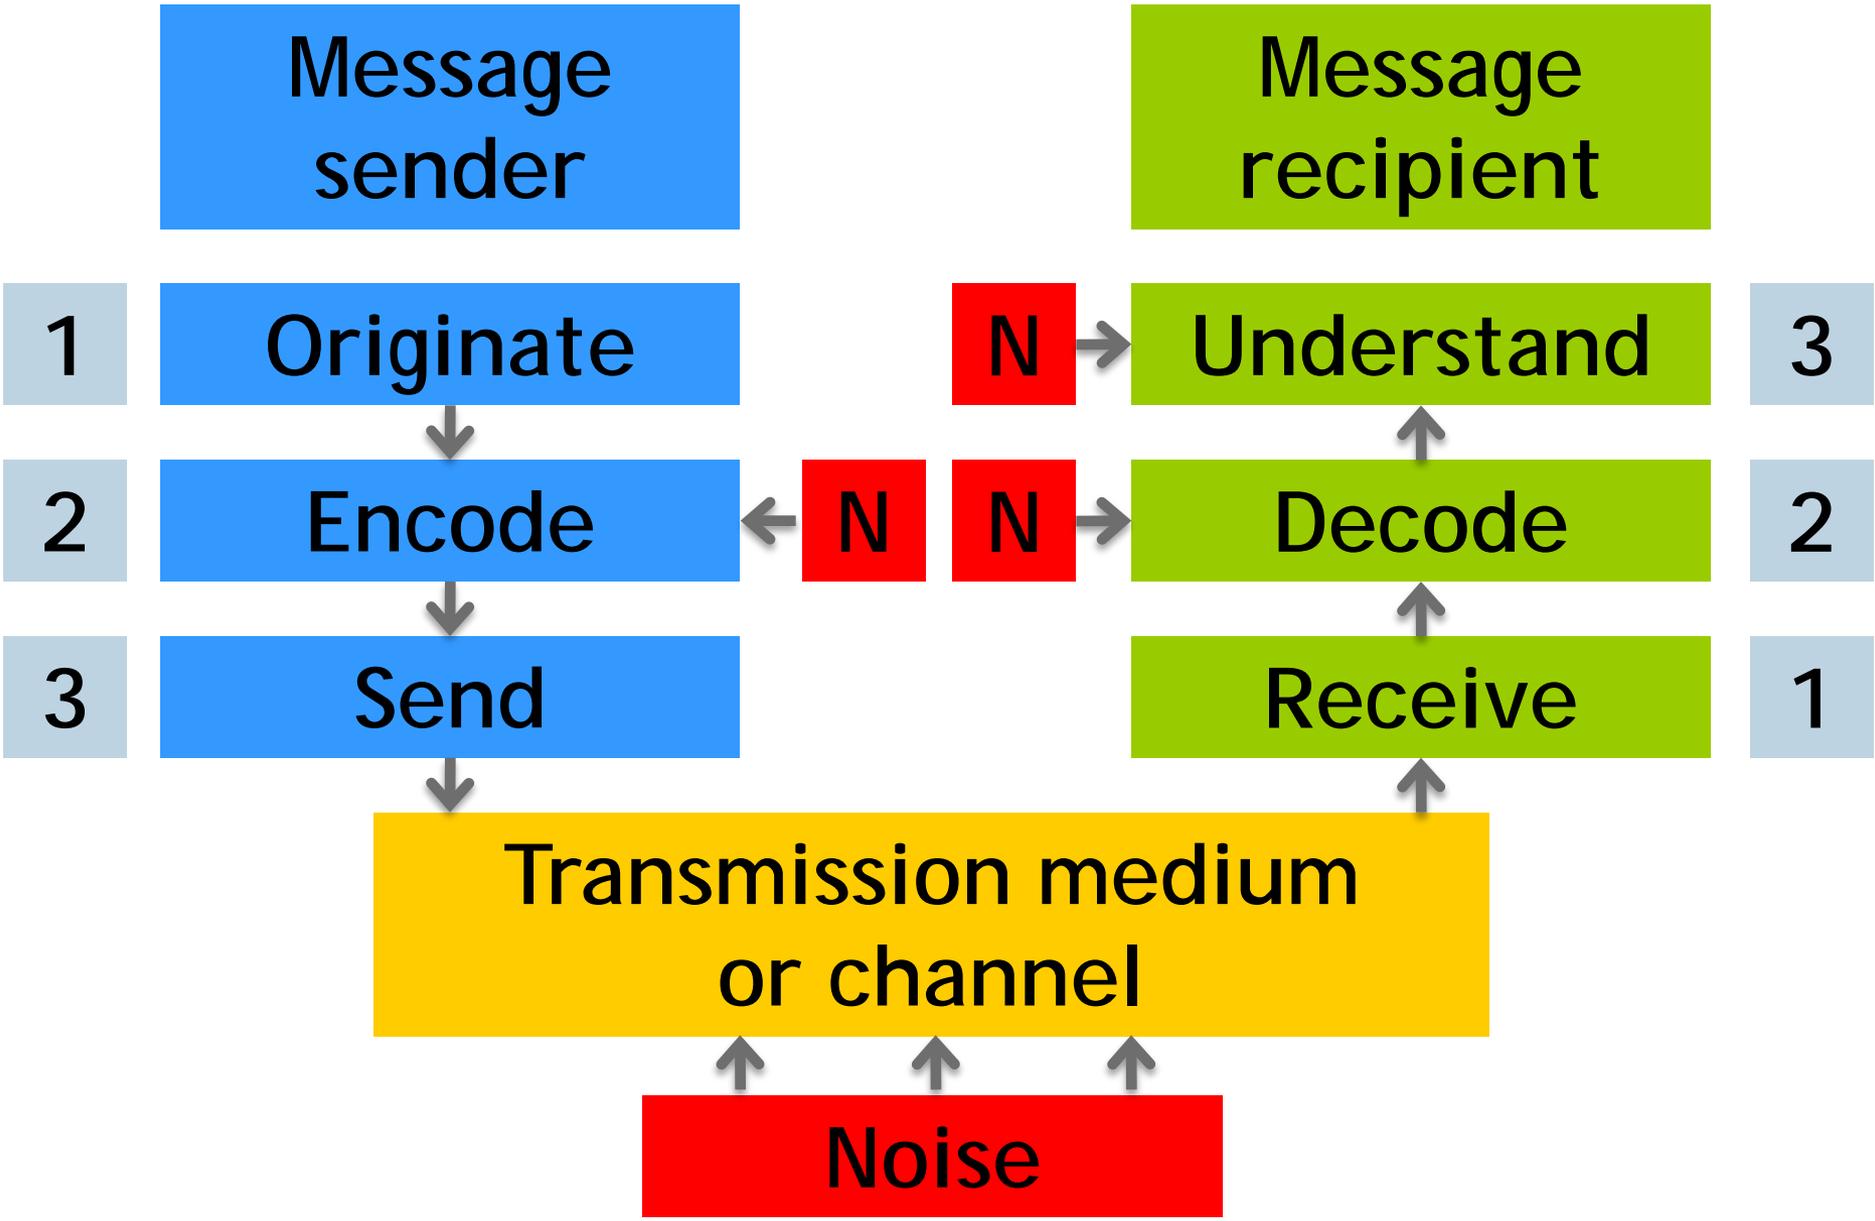

Information theory

- Prof. Claude Shannon

- Communications theory
- Public relations theory

2 Translate to practice

PR outcomes

Business results

3 A standard framework for PR program measurement

Activities

- What did you do?
- Control by PR
- Visible
- Operational efficiency
 - Staff time
 - Budget
- Use: PR group, CFO

Activities

Outputs

Reception

Outtakes

Comms results

Business results

Outputs

- Message availability to target audiences
 - Media analytics
 - Social media analytics
 - Other (events, etc.)
- Correlate with activities
- Use: Within PR group

Activities

Outputs

Reception

Outtakes

Comms results

Business results

Reception

- Handle PR outputs
- Manipulate outputs
- Involvement with outputs
- Correlate with activities
- Is this engagement?
- Use: *Within PR group*

Activities

Outputs

Reception

Outtakes

Comms results

Business results

Outtakes

- Cognitive change

"Standardization in Public Relations Measurement
and Evaluation," *Public Relations Journal*, 2011.

Outtakes

Outtakes

- Cognitive change
 - Awareness
 - Understanding
 - Perceptions
 - Advocacy
- Use: CMO, marketing and communications executives

Activities

Outputs

Reception

Outtakes

Comms results

Business results

Communications results

- Specific, desired behaviors
- Precursor to business value
- Link to outcomes, etc.
- Use: CMO, marketing and communications executives

Activities

Outputs

Reception

Outtakes

Comms results

Business results

Business results

- Tactical, consumer results
- Strategic business results
- ROI
- Statistical methods
- Use: CEO, CMO, business unit leaders

Activities

Outputs

Reception

Outtakes

Comms results

Business results

4 Putting measurement into practice

Step 1

- Define business goals
- Link PR objectives to business goals

Step 2

- Select measurable objectives
 - Specify the audience(s)
 - Specify desired audience-specific outcomes
 - Ends or outcomes, not means
 - Time frame

Step 3

- Select metrics

Outputs	Outtakes	Outcomes	Business results
<ul style="list-style-type: none"> ■ Press releases ■ Journalist briefings ■ Reporter contacts ■ News stories ■ Messages ■ Impressions ■ Media value ■ Events ■ Analyst receptions ■ Customer case studies ■ Executive speaking ops 	<ul style="list-style-type: none"> ■ Awareness ■ Comprehension ■ Message retention ■ Attitude ■ Perceptions ■ Intentions 	<ul style="list-style-type: none"> ■ Behaviors ■ Purchases ■ Votes ■ Employee job applications ■ Support or advocacy ■ Inflate tires ■ Change smoke alarm battery ■ Visit museum 	<ul style="list-style-type: none"> ■ Sales ■ New customers ■ Customer loyalty ■ Lower customer acquisition costs ■ Employee retention ■ Permission to open a factory ■ Lower accident rates

Step 4

- Set quantitative targets

Unacceptable	Acceptable	Superior
Not worthwhile	Worthwhile	Extremely worthwhile
< Satisfactory	Satisfactory	> Satisfactory
Fail	Pass	Superior
F	C	A
Less than expected	Expected	More than expected

Step 5

- Measure

Step 6

- Analyze
- Index the results
- Evaluate
- Recommendations for improvement
- Report
 - Dashboard
 - Evaluation matrix
 - Balanced Scorecard

Balanced scorecard

CUSTOMER PERSPECTIVE

Metric name	IBIS customer satisfaction survey (project-based): Overall satisfaction score on completed projects	
Description	Total percentage answering one of the top two rating scale responses	
Formula	Question: Rate the Internet, Broadcast, and Image section in the following areas (Scale: excellent / good / fair / poor / very poor): 1. → Overall satisfaction with the project.	
Rating	Exceeds target	> 60% > Benchmark % + 10%
	Meets target	50% - 60% Benchmark % to benchmark + 10%
	Below target	< 50% < Benchmark % -
Frequency of update	Annual	
Data source	IBIS customer satisfaction survey (project-based)	
Owner	IBIS	
Additional information		

Metric name	IBIS customer satisfaction survey: "Recommend" score on completed projects	
Description	Total percentage answering one of the top two rating scale responses	
Formula	Total percentage answering one of the top two rating scale responses You recently worked with the Internet, Broadcast, and Image section of the Division of Communications on a project. We would like your honest feedback on our work so that we can deliver the best service to our partners and colleagues. 1. If someone at UNICEF asks for your advice about a similar project, how likely would you be to recommend that they work with the Internet, Broadcast, and Image section on the project? (Scale: extremely likely / likely / somewhat likely / not very likely / not at all likely)	
Rating	Exceeds target	> 60% > Benchmark % + 10%
	Meets target	50% - 60% Benchmark % to benchmark + 10%
	Below target	< 50% < Benchmark % -
Frequency of update	Annual	
Data source	Print and language customer satisfaction survey (project-based)	
Owner	Print and language section

Predictive analytics

A decorative graphic consisting of several horizontal lines of varying lengths and colors (gray and white) extending from the right side of the slide towards the center.

The situation today

- Companies monitor traditional and social media...
 - But don't know what media messages actually change opinions and drives behaviors

The situation today

- Companies probe the marketplace via surveys and media listening platforms, but ...
 - Cannot look ahead
 - Risk getting blindsided

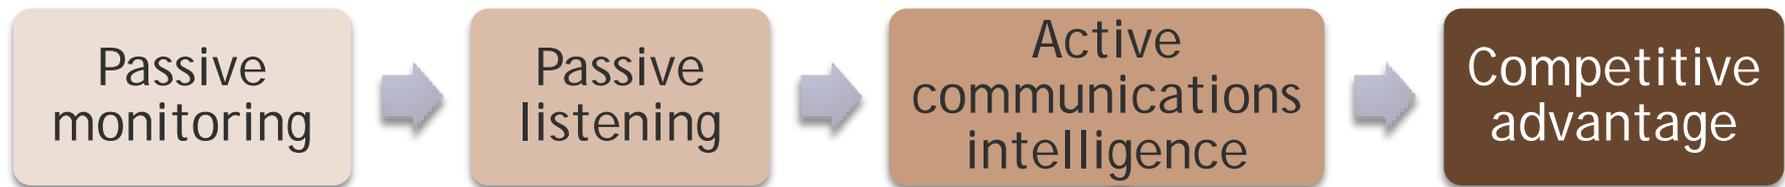

The situation today

- Monthly measurement reports give a look backwards, but ...
 - Cannot evaluate possible scenarios

Today's challenge

- Analyze past data
- Understand what really drives change
- Link social / traditional media to business outcomes
- Build systems to give a look ahead
- Facilitates responsive management

Case studies

Toyota recall crisis

Consumer sentiment about the economy

Teenage smoking behavior

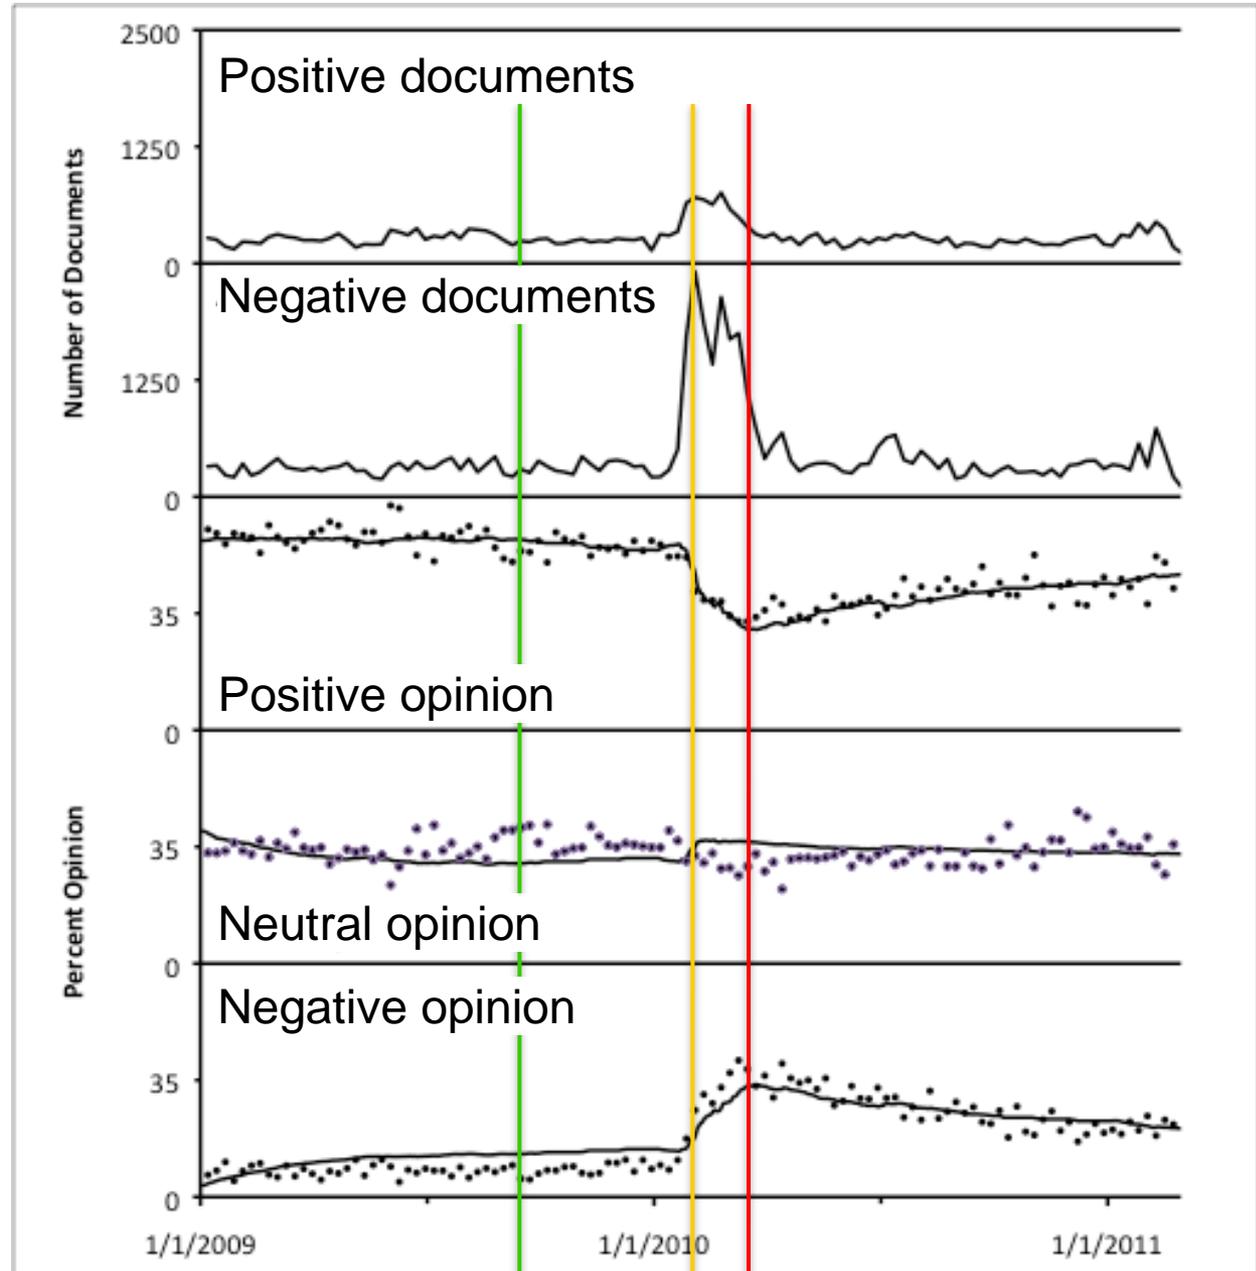

1. Toyota recall crisis

- Key questions
 1. What shapes opinion about the Toyota brand?
 2. Can we predict brand reputation from media?
- Data
 - Predictor variables
 - News, online, blogs, forums ... no broadcast
 - Dependent variable
 - Brand reputation

All media
 $R^2 = 0.84$

- Survey
- Model

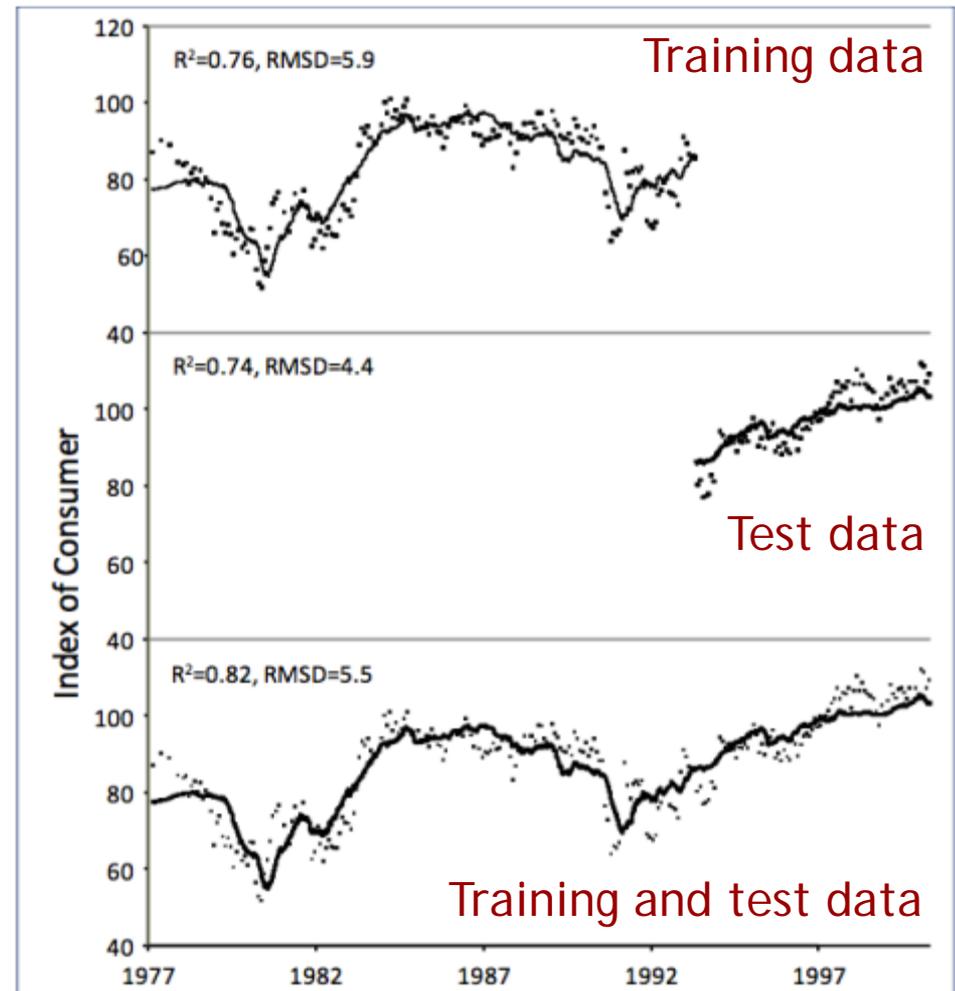

2. Consumer economic sentiment

- Key questions
 1. What shapes consumer opinions about the economy: media or marketplace experience?
 2. Can we predict consumer sentiment from media alone?
- Data
 - Predictor variables:
 - AP wire and *Washington Post*
 - Dependent variable:
 - University of Michigan Consumer Sentiment Index
 - 1977 to 2007

Key results

- We can predict based on media alone
- Models based work over long time period
- Media play primary role in shaping opinion about their economic well-being
- Shelf life of information near zero

3. Teenage smoking

Key questions

- Can we predict teenage smoking behavior from media alone?
- Does public policy affect smoking behaviors?
- Do anti-smoking campaigns work?

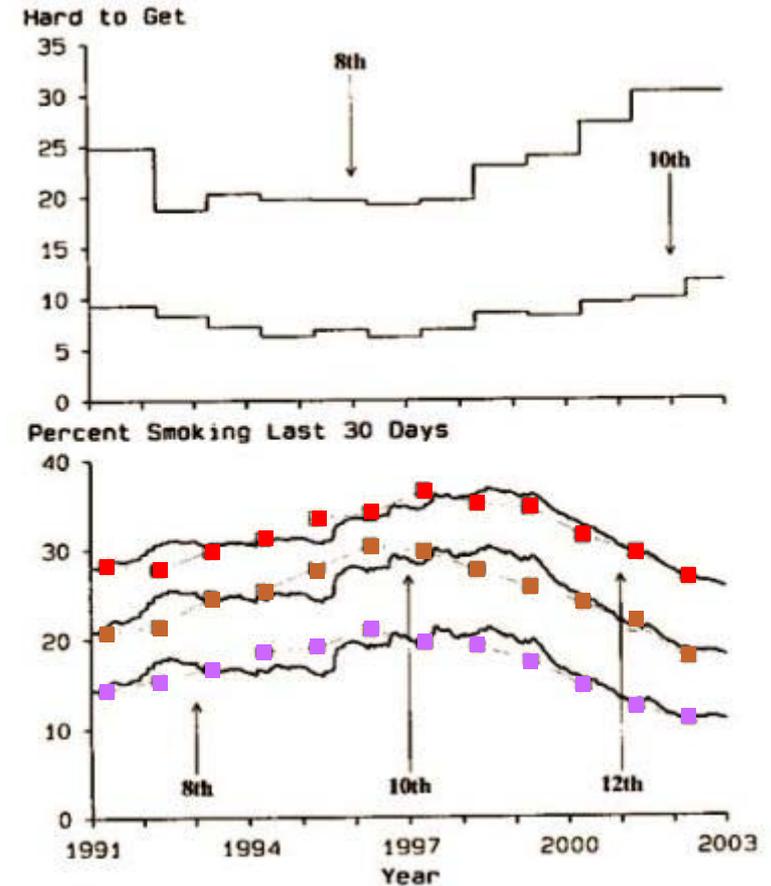

Data

- Predictor variables:
 - Newspapers, Google newsgroups
 - 10 messages
 - Cost per pack
- Dependent variable:
 - Monitoring the Future nationwide surveys (<http://monitoringthefuture.org/>)
- 1991 to 2002

Key results

- We can predict behaviors based on media alone
- Cost improves prediction
- Attitude that cigarettes are hard to get improves prediction
- **Anti-smoking campaigns and policy changes work**

■ Reported smoking

— Predicted smoking

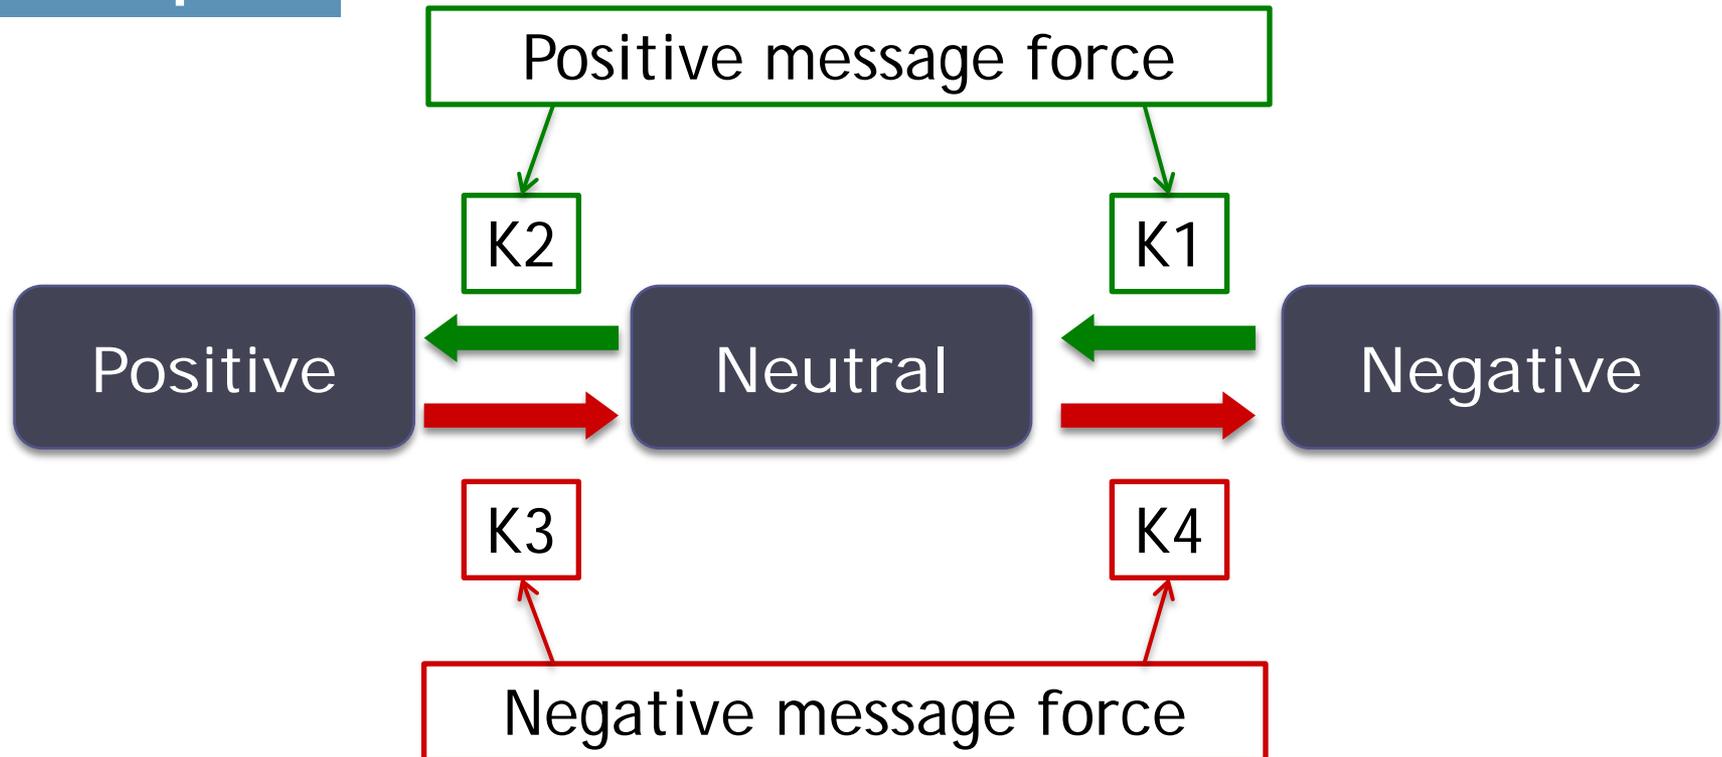

The InfoTrend™ Model

Powerful yet simple: basic structure

Step I

Minimal ideodynamic model

$$F_G(t) = k \sum_i C_{i,G} \exp(-p(t - t_i)) + \epsilon_G(t)$$

$$\frac{dI_G}{dt} = F_G(t)(1 - I_G) - F_B(t)I_G.$$

$$I_G(t) = \frac{\int F_G(t) e^{-\int (F_G(t) + F_B(t)) dt}}{e^{-\int (F_G(t) + F_B(t)) dt}} + \frac{c}{e^{-\int (F_G(t) + F_B(t)) dt}}$$

Recruitment term

Defection term

$$B_{G,t} = B_{G,t-1} + k'_2 * G_{G,t} * B_{C,t-1} - k'_2 * G_{C,t} * B_{G,t-1}$$

Data requirements

Predictor variables

- Multi-channel
- Sentiment scores
- Messages tagged

Outcome variables

- Survey data
- Behavioral data
- Business data
- **Must show change**

Concluding remarks

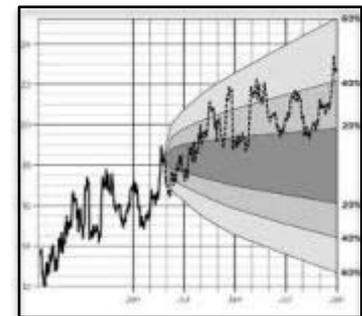

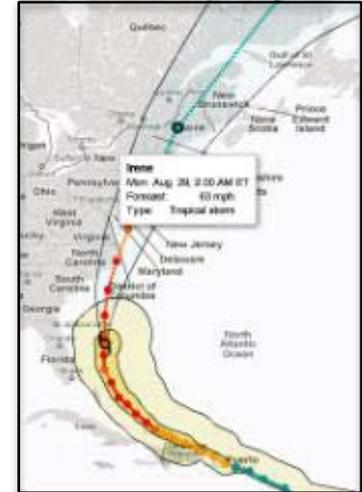

What have we learned?

- Media → Outcomes
 - Sentiment
 - Messages
- But ... random variability
 - What does this mean for communications>

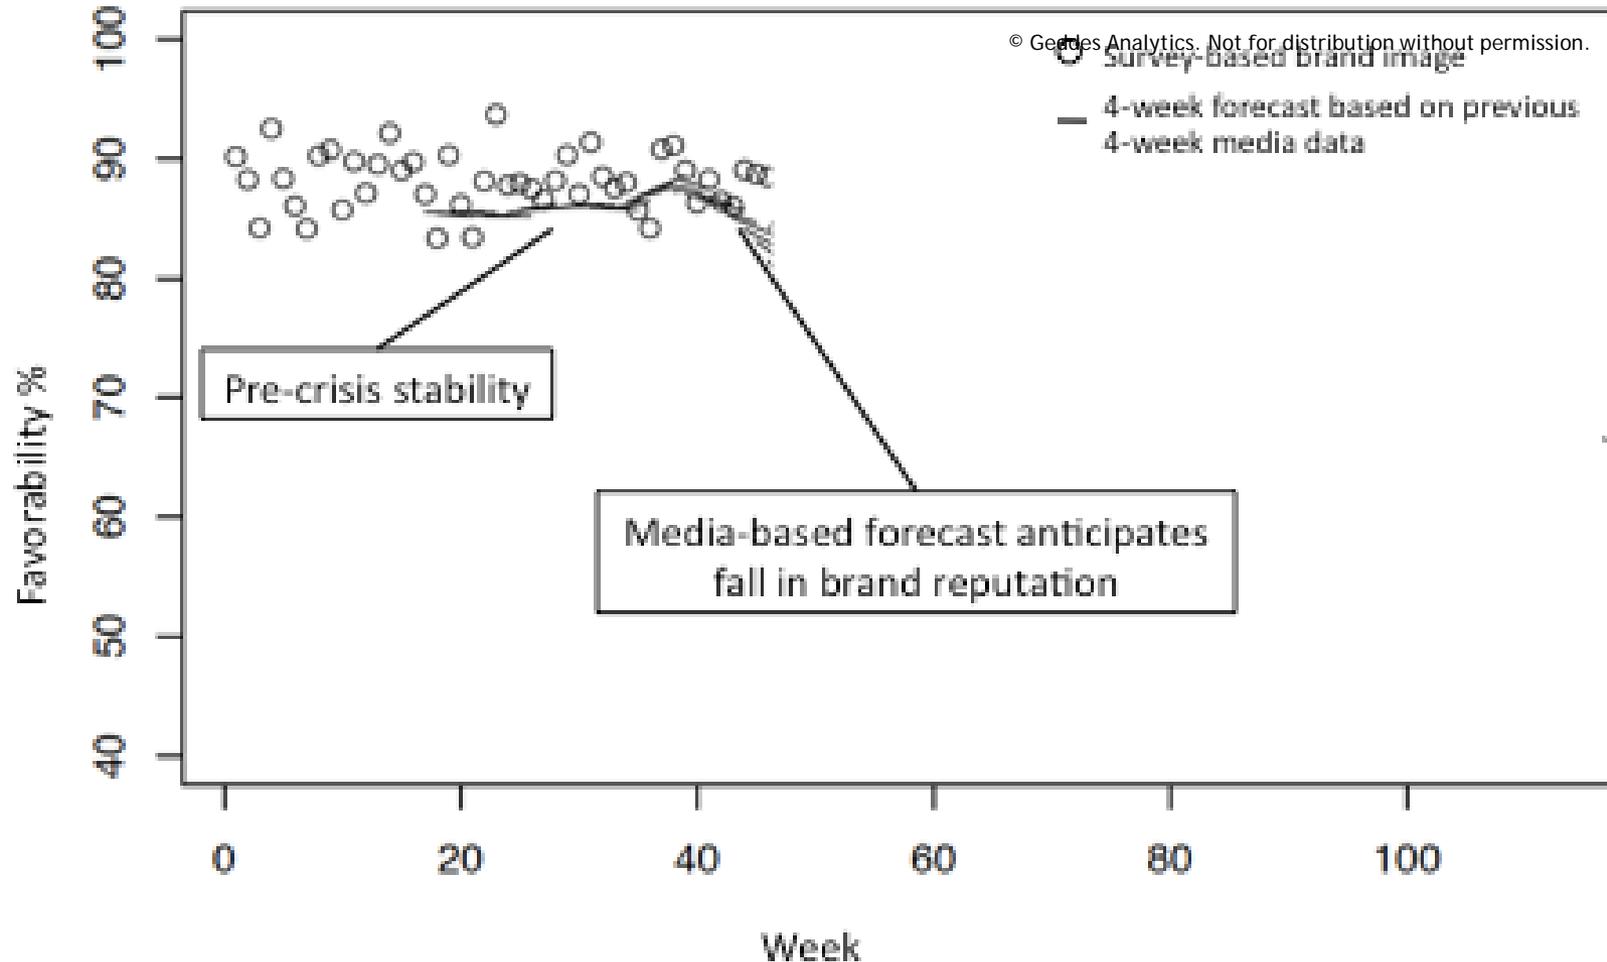

Prediction and forecasting

- Early enough to take action
 - Probable vs. improbable
 - Scenario planning and simulation
 - Strategic responsiveness
- Michael Raynor. 2007. *The Strategy Paradox: Why Committing to Success Leads to Failure*. New York: Doubleday.
